

- Estimating and tracking costs accurately is a common problem for many small, medium, or large scale companies. With the increasing variety of products and complexity of production processes, the number of cost control items has reached thousands.
- Enfotek MDS provides a quick and error-free pricing calculation opportunity with cost estimation modules designed considering your business processes. Every day, hundreds of transactions are carried out by independent units, and budget planning and accounting departments have access to the information they need through Enfotek MDS.

## COST CONTROL

ENFOTEK MDS

- **Enfotek MDS connects all business applications with price, exchange rate, and amount information thanks to its enhanced data infrastructure. This allows for cost control to be carried out for every transaction within the company.**

*Enfotek ERP and Software Solutions provide fast and accurate pricing calculation options.*

- **Preliminary Costing:**

Enfotek MDS offers a fast and efficient preliminary costing option, supported by classified and databased information.

- **Purchase Price Control:**

MDS provides purchase prices by retrieving them from both previous purchasing transactions and integrated price lists. Management can approve prices in multiple stages.

- **Shipping Note - Invoice Matching:** Enfotek MDS ensures quick and accurate matching of purchase order price to invoice price, as well as order quantity to shipping note quantity.

- **Real-time Inventory Costing:** Enfotek MDS automatically calculates the cost of raw materials in the warehouse using any of the following methods: fifo, lifo, currency-indexed, or average price calculation.

- **Production Cost Control:**

Enfotek MDS contributes to reducing labor costs through the standardization of production methods and the implementation of methods that minimize idle time.

- **Actual Order Cost:**

Enfotek MDS automatically generates comparative order cost tables, which allow for the comparison of actual costs with initial costs.
